

Welcome To The Future

Customized For You!

Home Theatre(s)/Smart Home/Office

What If a Company Actually Helped Design, Buy, Implement & Execute?

The beauty of home automation is that while your options are virtually unlimited, it is surprisingly affordable and simple. The challenge is deciding just where to start.

At a basic level, home automation gives you remote or automatic control of things around the home. You may want something as simple as remote or automatic control of a few lights....or, something a bit more sophisticated in the areas of security, advanced controllers, or voice voice recognition.

Whether your needs are simple or complex, at Ashunya, we believe that home automation should be what you want it to be. Whatever your automation project, we will help you make life around the home more convenient, safe, and fun!

Welcome To The Future

Whether you are a new homebuilder or you want to upgrade your existing home audio/video system, Ashunya can help you with all of your Home Theater/Smart Office and audio/video needs.

Pre-wire Services

As a licensed low voltage contractor, we offer many pre-wire services including computer networks, video surveillance, speakers, whole-house music and video distribution, and remote controls. If you are planning to install a complete home audio/video system in the future, consider using our pre-wire services today to prepare for future expansion.

Home Theater

We will design and install your home theater with a plasma TV or projector and screen. We provide complete installation, calibration, and training for effective use of your new system.

Home Audio

We will customize your home with an audio system inside and out – from in-wall or in-ceiling speakers, volume controls, surround sound systems and more.

In-home Automation

We will come to your home to provide system design and consultation, to ensure your home will be setup for peak performance.

Programming

Our full time programming staff is ready to provide custom programming for remote controls to make your audio/video system easy to use. By simply pressing one button, a series of events will occur. For example, if you want to watch a movie, simply pressing the "Movie" button will turn on the video display, receiver, DVD player, start the movie, dim the lights, and close drapes or shutters.

Smart Office / Home Portfolio – How Can I Gain Control?

Remote Control

Remote control gives you the convenience of controlling lighting, appliances, security systems and consumer electronics from wherever you happen to be at the time – like your couch, car or even in your bed. There are several different "methods" of controlling devices remotely.

Automatic Control

Automatic control adds even more convenience by making things happen automatically, with minimal to no effort. Examples include having your whole home theater turn on and tune to the desired station after pressing one button on your remote, or having your lights turn on at dusk and off at a desired time.

What are the Benefits of Smart Office/Home Automation?

Home automation makes life more convenient, safe and fun!

Convenience

Imagine adjusting the thermostat while you're still in bed, controlling the volume of your home audio system from any room, or having the wall/ceiling heater in your bathroom turn on automatically five minutes before your alarm clock wakes you (during winter months) so that it is the perfect temperature when you enter. The possibilities are endless!

Safe

Imagine how much safer you'd feel returning to a lit home in the evening, and even turning on additional lights from your keyless remote upon your arrival...or, if while you were away your whole home lit up when motion was detected and you were automatically notified via e-mail...or, if while you were away your security system contacted you when an alarm sounded (which can even include a low or high temperature or water in the laundry room or basement). Prowlers beware!

Fun

Whether you like avoiding surprise visitors at your front door by viewing them on your camera-connected home TV, or you like tuning your stereo using voice recognition, you'll find it surprisingly enjoyable. Let the fun begin!
